

# BS Film Production

Bachelor of Science in film program is designed to cover the three areas of film production, which include preproduction, production, postproduction. Students complete a final project, which allows them to apply the skills they learned throughout the program. While studying preproduction, students learn skills such as how to storyboard, review scripts, set budgets, and find locations for filming. The production area of the program focuses on different types of cameras and the different roles of workers on a film set. Postproduction coursework is designed to teach students how to edit and create the final product.
